

Health Matters in Architectural History				
Questions	Asker Name	Answer	Question Time	Answered Time
Question for the panelists. What according to you lessons we are need to learn from COVID-19 experience, in plannig and construction medical and health infrastructures of post-COVID-19 era? Thanks! Shmuel	Shmuel Yerushalmi	My upwriten (first) question with any correction. Please to ask from this version. Question for the panelists. What according to you lessons we are need to learn from COVID-19 experience, in the time plannig and construction medical and health infrastructures of post-COVID-19 era? Thanks! Shmuel	2/18/2022 11:26	2/18/2022 11:30
According to projections, we will see a zoonotic pandemic every 4-6 years. How will hospital designs change to accomodate that?	Sumita Singha		2/18/2022 11:28	
Question for Louisa- Do you feel that the change in memorials being used in new ways, as in being redecorated for political change or COVID memorials renders the original memorials meaning or intention voided? Do these reclaimed memorials now stand to serve only their new purpose as we move forward?	Anonymous Attendee	Such a great question- thank you. Maybe it is both your points- that that they gain in meaning, through the layers of occupation and intervention?	2/18/2022 11:28	2/18/2022 11:32
	Anonymous Attendee	There are some excellent scholarship on the issue of "spontaneous" or living memorials.	2/18/2022 11:28	2/18/2022 11:35
	Anonymous Attendee	Wonderful- I agree with you on this point as well, they almost take on hybrid meanings wherein they do not lose the old but someone melt with the new!	2/18/2022 11:28	2/18/2022 11:41
	Anonymous Attendee	Exactly! Such a great point.	2/18/2022 11:28	2/18/2022 11:44
And more one. When you will ask my question, please to mention my name.	Shmuel Yerushalmi		2/18/2022 11:31	
Question for Bill. What according to you, modern medical architects can to learn and use today, from planning and design hospital and other medical infrastructures in ancient islamic age? Thanks! Shmuel	Shmuel Yerushalmi	live answered	2/18/2022 11:36	2/18/2022 11:58
health care design is not a template that can be imposed on all people. some cutureal groups engage the family as part of the care of a patient. I remember when a family brought their mobile home to the hospital to be there with their family member. they even wanted to bring their own food to feed their family patient.	Anonymous Attendee	Totally! Cultural diversity is a key consideration for healthcare spaces which is often suppressed - in my understanding, a victim of the long assumed "objectivity"/"cultural neutrality" of science (including medicine).	2/18/2022 11:58	2/18/2022 12:01
https://www.bloomberg.com/news/articles/2018-10-30/what-architecture-learned-from-tb-hospitals	Charles Kaminski		2/18/2022 12:02	
Daniela mentioned her use of alternative methods or frameworks when studying the topic of Epidemic Urbanism (considering air as commons, studying the body in space). Does the intangible nature of germs, viruses, and epidemics demand this microbial / anatomical approach to architectural history? Further, what alternative methods or frameworks are the other panelists employing in their research?	Mary Begley	live answered	2/18/2022 12:04	2/18/2022 12:12
Has Dr Mayo's concepts for "the patient first" been acknowledged in hospital/clinic design in US healthcare. His philosophy of medical design influenced the design of the Mayo Clinic which surrounds patients with beauty .	marion phillips		2/18/2022 12:10
